

PRIYANSHU SINGH

Frontend & Full Stack Developer (MERN) | Agentic AI & Automation

Bangalore, India | +91-8273552253 | priyanshuvwork@gmail.com | [GitHub](#) | [LinkedIn](#) | [Portfolio](#)

SUMMARY

Frontend & Full Stack Developer (MERN) with production frontend experience across React, Next.js, and TypeScript, plus full-stack project experience building REST APIs, authentication, and databases with Node.js, Express, and MongoDB. Currently building creative automation systems at WPP - including a self-built JavaScript/JSX pipeline that auto-generates multilingual campaign designs in Adobe InDesign. Extending that automation thinking into agentic AI workflows - RAG pipelines, LangGraph orchestration - alongside solid fundamentals in GraphQL and REST/Redux integration.

EXPERIENCE

Creative Technology Intern - Agentic AI & Automation | WPP

Jul 2026 - Present

- Automated a multilingual campaign design workflow in Adobe InDesign - generating all 50-60 language variants across multiple aspect ratios (16:9, 21:9) in under a minute per run, versus hours of manual design work previously.
- Designed the CSV data structure, InDesign layer setup, and master file architecture, then built the JavaScript/JSX scripts that parse CSV data and update named layers (title, description, CTA, year) to auto-generate each design variation.
- Wrote unit tests for the JS/JSX automation scripts and end-to-end tests for the React/Next.js frontend interfaces, catching regressions before releases.
- Worked closely with the development team to learn end-to-end n8n workflow automation - triggers, webhooks, API integrations, conditional logic, and data transformation - applying the same automation thinking used in the InDesign pipeline.
- Built frontend interfaces with React, Next.js, TypeScript, and Tailwind CSS to power internal automation and creative-tooling platforms.

Software Engineer Intern - Frontend | EWHENT

Jan 2026 - Jun 2026

- Delivered frontend flows - dashboards, inventory, billing, authentication, role-based access - for a B2B SaaS/ERP platform spanning admin and end-user modules, styled with SCSS and Bootstrap.
- Built end-to-end B2C flows including onboarding, catalog, cart, and checkout, styled with SCSS/Bootstrap and using React Query to fetch and cache catalog/cart/checkout data alongside Redux-managed app state.
- Improved page load and rendering speed by 30% through code-splitting, memoization, and query optimization.
- Wrote unit and integration tests using Jest and React Testing Library to strengthen code reliability and catch regressions before release.

PROJECTS

Digital Heroes - Full-Stack Subscription Platform - [Live](#) | [GitHub](#)

- Architected a full-stack subscription platform using Next.js, React, TypeScript, and Supabase/PostgreSQL, implementing session-aware authentication and Row-Level Security (RLS) policies for granular, role-based data access.
- Integrated Stripe for end-to-end subscription billing - Checkout, recurring plans, and webhook-driven state sync - and built DB-backed business logic for draws, prize pools, and donations, validated with Zod/React Hook Form and covered by Vitest tests.

Personal Portfolio AI - AI-Powered Portfolio Assistant - [Live](#) | [GitHub](#)

- Built a retrieval-augmented AI assistant for a personal portfolio site with a Groq-powered reasoning layer that decides whether a query can be answered from resume context or requires semantic retrieval via a FastAPI + Supabase/PostgreSQL backend.
- Implemented Server-Sent Events streaming, cutting perceived response wait from 10-20+ seconds down to near-instant first-token feedback, plus a source-validation layer preventing fabricated GitHub links and a job-description analysis endpoint.

Sales CRM - Full-Stack CRM Application - [Live](#) | [GitHub](#)

- Built a full-stack CRM with a React frontend and Node.js/Express REST API, backed by MongoDB, to manage leads, customers, deals, and lead-conversion workflows.
- Implemented JWT-based authentication with bcrypt password hashing and role-based access control, backed by API and end-to-end test suites covering deals, lead conversion, and regression workflows.

AI Trading Research Assistant - AI-Assisted Quantitative Research Tool - [GitHub](#)

- Built a Next.js/TypeScript tool that turns ambiguous market questions (e.g., "Does buying NIFTY after a sharp fall work?") into structured experiments via the Gemini API, validating AI-generated definitions with Zod and routing all calculations through a separate deterministic backtesting engine to avoid fabricated results.

SKILLS

Frontend: React.js, Next.js, React Native, TypeScript, JavaScript (ES6+), Redux, HTML5, CSS3, SCSS/SASS, Bootstrap, Tailwind CSS, CSS Modules, Styled-components, GSAP, Three.js

Backend & Data: Node.js, Express.js, Python, FastAPI, REST APIs, GraphQL (Apollo Client), TanStack Query (React Query), MongoDB, PostgreSQL, Supabase, SQL, Stripe, Axios

Agentic AI & Automation: LangChain, Groq API, n8n, Zapier, OpenAI API, Anthropic API, Gemini API, Prompt Engineering, Agent Workflow Design

Cloud & DevOps: AWS (S3, IAM, EC2, CloudFront), Docker, Linux, macOS, Windows

Testing & Tooling: Jest, React Testing Library, Cypress, Playwright, Git, GitHub, Postman, Figma, Firebase

AI-Assisted Dev Tools: Cursor, GitHub Copilot, Codex, Kiro, Antigravity

CURRENTLY BUILDING IN

Extending the retrieval-based AI work from Portfolio AI toward multi-agent orchestration with LangGraph and vector database integration.

CERTIFICATIONS

- Generative AI & Prompt Engineering - Udemy, 2026

EDUCATION

Bachelor of Computer Applications

2022 - 2025

Lovely Professional University
